

Stop Smart Meters! Quick Guide to Assessment of "Safe" Levels of RF and LF Radiation using the Cornet ED78S

Thank you for buying a Cornet ED 78S meter, and for supporting the work of Stop Smart Meters! The meter is accurate and can pick up even brief spikes of radiation from a smart meter, or other RF emitting sources. The meter also measures low frequency (LF) fields from household wiring, power lines, etc. Here is a guide to using the Cornet to assess levels of radiation in your environment:

Please do not rely on the GREEN, YELLOW, & RED indicator lights as a guide to what is "safe." Also, there is no evidence that the levels listed as "safe" in the manual are in fact truly safe. Biological effects have been observed down to very low exposure levels.

• Guidance on Determining Healthy Radiofrequency (RF or Microwave) levels:

Building Biology (SBM-2008) For Sleeping Areas (Radio Frequency) All units in milliwatts per meter squared (mw/m2) the same units that are displayed in RF mode on the meter in large numbers:

No Concern:	Slight Concern:	Severe Concern:	Extreme Concern:
less than 0.0001	0.0001 — 0.0100	0.0100 — 1.0000	over 1.0000

Bioinitiative Report (2012): 0.0300 recommended upper threshold of exposure

• Guidance on Determining Healthy Low Frequency (LF) levels:

Building Biology (SBM-2008) For Sleeping Areas- Low Frequency-All units in microtesla (uT)- the units displayed in either of the 2 LF modes on the Cornet:

No Concern:	Slight Concern:	Severe Concern:	Extreme Concern:
less than 00.02	00.02 - 00.10	00.10 — 00.50	over 500

- Please recycle alkaline (disposable) batteries when used- do not throw them in the trash
- We recommend use of rechargeable Li-Ion 9V batteries with at least 500mAH capacity- these will save you money and resources. We use 600mAH EBL Lithium Ion rechargeable 9V batteries.
- Use a case to prevent the on/ off switch accidentally turning on in your bag and depleting your battery- you can use the included plastic case or find a hard shell case- search online for "Nintendo 3ds carrying case" or " mobile hard disk carrying case."
- Experiment and find out for yourself what is healthy and safe. Trust your body. Measure and compare your living and working environments on the meter, and see how you feel.
- Use sound function to delineate between different sources. Video: http://bit.ly/1wJ8pcq
- Information about shielding can be found on our FAQ page: http://bit.ly/1vh63Od
- If you have any questions, please e-mail us at <u>info@stopsmartmeters.org</u> or write to us at Stop Smart Meters! PO Box 682 Portola CA 96122. Thank you! <u>StopSmartMeters.org/store</u>
