

# “SMART” METERS?

*“PG&E says smart meters are green—they save energy and will stop global warming.”*

**WRONG.** Energy savings happen only when customers use less. You don't need a radiation-emitting and privacy-intruding smart meter to save energy. It's PG&E's green-wash money-grab.

*“PG&E says smart meters emit RF radiation only 45 seconds a day. That's not very much...”*

**WRONG.** What they don't tell you is that means 22,000+ spiked pulses of RF radiation, going off all day and all night—and you cannot turn it off. This is enforced exposure to a World Health Organization Class 2B carcinogen—RF microwave radiation.

*“It's not true that smart meters make people sick—otherwise it'd be in the news.”*

**WRONG.** All over California and the US, smart meters have made people ill—headaches, ringing in ears, sleep disturbances, heart problems, nausea, anxiety. RF causes DNA breaks and blood-brain barrier breaches. Thousands have submitted complaints to authorities. How many more?

*“They won't let my private data from the smart meter get into the wrong hands, will they?”*

**WRONG.** Utilities & the industry have been talking from the beginning about the massive goldmine of data they are going to collect from smart meters. Are you and your family for sale?

*“PG&E says I can control all the appliances in my house online, and save money.”*

**WRONG.** Unless you replace every appliance with new, radiation-emitting versions that “talk” to your smart meter—a very expensive way to “save money.”

*“PG&E says the radiation from my cell phone is stronger than a smart meter”*

**WRONG.** Peak power of the spiked radiation pulses from a smart meter can be stronger. It's your own personal cell tower—all night, all day, every day.

*“Why haven't I heard more about smart meters in the media? It must not be that important.”*

**WRONG.** Media blackout is no indication of anything but the power and money of PG&E and the wireless industry. Who do YOU think should determine what goes on your home?

*“I hear we need to update the electric grid. PG&E says smart meters are part of the smart grid.”*

**WRONG.** Wireless smart meters are not a necessary part of grid upgrade. Our grid does need much work—but wireless meters make the whole grid MUCH more vulnerable to cyber-attack.

*“They tell me smart meters are safe. They wouldn't be putting them on houses otherwise—right?”*

**WRONG.** There are many accounts of fires and appliance damage resulting from smart meters. Smart meters lack the most basic safety certification from Underwriters Laboratories (UL).

*“PG&E wouldn't lie—or do something unsafe, unhealthy, or intrusive, would they?”*

**WRONG.** PG&E's record of disregard for the human consequences of its actions goes back decades. These are untested devices. You are their guinea pig. They are a monopoly utility, and by now we know what monopolies do: ABUSE POWER.

**But this time we say NO.**

*What can you do?*

**Call the PG&E Opt-Out List:  
1-877-743-7378**
