- SB-2232 allows residents of Tennessee to opt out of having a Smart Meter on their property, and have an analog meter installed instead.
- Smart Meters are associated with biological harm. People have a right to protect their health, without being exposed to microwave radiation 24 hours a day, 7 days a week - that they cannot turn off.
- Some people get very sick when exposed to radiation and dirty electricity from Smart Meters, and cannot live in a home with Smart Meters.
- Privacy is also a concern. Smart Meters record energy usage second by second, in real time, all the time. Without our consent, this is a breach of our privacy rights.
